Essays:

(20)

1. A 50 years old male complained of a swelling in the upper right side of the neck of two months duration. The swelling was firm and non-tender and progressively increasing in size. The patient mentioned that he has been suffering from right side offensive blood stained nasal discharge for six months duration. Now he has diplopia, right side nasal obstruction and looseness of the teeth of the right side of the upper jaw. How do you proceed to evaluate the case. Discuss the treatment options.
