ANATOMY- PAPER II

Time: 3 Hours

Total Marks: 50

- Answer all questions
- Draw diagrams wherever necessary

Long Essay

(10)

1. A 65-year old man presented with dilated veins around the umbilicus and vague pain in the epigastric region. He also had a history of bleeding per rectum. Radiological examination revealed an abnormal growth of the 'head and neck' of the pancreas. Based on your anatomical knowledge answer the following questions.
 - Name the structure that would have been compressed by the pancreatic growth to cause the clinical findings.
 - Give the formation, course, relations and termination of the structure.
 - Name all the possible sites, where there could be dilated veins, giving the names of the veins involved with reasons and clinical implications
 - What are the other structures that are likely to be compressed by the growth
 - Mention the sources of development of the pancreas (1+4+3+1+1=10)

Write briefly on:

(3x5=15)

2. Vermiform appendix
3. Mandibular nerve
4. Thalamus

Write notes on:

(5x3=15)

5. Tympanic membrane
6. Interior of larynx
7. Development of lips
8. Crus cerebri
9. Levator palpebrae superioris

Short answer:

(3x2=6)

10. Visual cortex
11. Development of the anal canal
12. Microscopic structure of palatine tonsil

Draw neat labeled diagrams:

(2x2=4)

13. Diagram showing the floor of the fourth ventricle
14. Posterior surface of the left kidney showing the relations
